We today live in the modern house, however we inherit unconsciously the spirit and sense of space according to the climate in Japan. This house is designed for the young family (couples and little children), which consists of the modern space and the traditional spirit of Japanese home. Specifically, modern equipment, open living space with a high ceiling and the Japanese old material and place evoked Japanese-style. We propose a new design method initiative to Japanese modern - old sense house with three themes, five human behaviors and ten settings.
